The new ZAUGG SF 90-85 snow blower for the Mercedes Benz UNIMOG provides a clear view and maximum clearing performance, perfect for professional snow clearing.

**Efficient, safe, no compromises:  
The new benchmark in snow clearing!**

## Key ZAUGG advantages at a glance:

### ZAUGG Wet snow concept

**Rotating chute for higher performance:** More snow cleared thanks to the rotating discharge chute with integrated centring, even with wet snow.

### ZAUGG Smart operator set-up

**TÜV-tested** for enhanced safety: There is an **unobstructed view** from the cab, even with the snow blower attached, in compliance with all regulations.

### Precision height adjustment using the parallelogram lift:

This function allows the height of the cutter rotor to be adapted flexibly to different depths of snow and types of surface.

### ZAUGG All bump control

**Collision protection with folding linkage:** The folding linkage folds back automatically in the event of a collision with obstacles to protect the snow blower and prevent damage to the cutter rotor.

**Cut-out clutch:** Increase safety and avoid damage to mechanical components with ZAUGG safety clutches. These automatically disengage the rotor in the event of an overload.

### ZAUGG Low emission principle

**Low fuel consumption** thanks to the optimised design, geometry and configuration of the cutter rotor and impeller.

## Options

### Discharge chute options

Choose from the following options:

- Telescopic chute
- 2-flap steel chute
- 4-flap stainless steel chute

### Lighting for enhanced safety

The optional lighting package provides the best possible visibility in the dark and in poor weather conditions.

### End bearings for greater strength

Robust end bearings provide a strong and durable mounting for the cutter rotor, even under high loads.

### Guide rollers

The rollers guide the snow blower smoothly over surfaces while reducing wear.

We look forward to talking to you about the many other advantages of ZAUGG snow blowers.
